I am passionate about architecture, and related design fields, and am an inquisitive student, who is good at solving problems in an organized and systematic manner. I believe in hard work, and therefore I am driven to put in my best effort to get things done. I am a team player and am very adjustable in working with people. I enjoy interacting with people of different cultures and knowing more about them, which has developed as a result of me living in different places in the world for almost 14 years of my life.

I am seeking an architectural internship that would challenge me to grow professionally and personally.
